**Alpha® Family of Liners**

There are three main points of difference among the liner family: Interface Type, Fabric, and Profile.

---

**Thermoplastic Elastomer Liners:**

<table>
<thead>
<tr>
<th>Interface Type</th>
<th>Alpha Classic® Liners</th>
<th>Alpha Hybrid® Liners</th>
<th>Alpha Basic® Liners</th>
</tr>
</thead>
<tbody>
<tr>
<td>Classic Gel</td>

<td></td>
<td>Uniform Progressive Symmetrical, AK</td>
<td></td>
</tr>
<tr>
<td>Symmetrical, 6 mm</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

---

**Silicone Liners:**

<table>
<thead>
<tr>
<th>Interface Type</th>
<th>Alpha Silicone® Liners</th>
<th>WillowWood® Express Liners</th>
<th>Alpha SmartTemp® Liners</th>
</tr>
</thead>
<tbody>
<tr>
<td>Silicone</td>

<td>Original Select Spirit MAX</td>
<td>Select</td>
</tr>
<tr>
<td>Progressive Symmetrical, AK</td>
<td></td>
<td>Uniform Symmetrical, AK</td>
<td>Progressive Symmetrical, AK</td>
</tr>
</tbody>
</table>

---

**Specialty Liners:**

<table>
<thead>
<tr>
<th>Interface Type</th>
<th>Alpha Duo® Liners</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interior: Classic Gel Exterior: Silicone</td>
<td></td>
</tr>
<tr>
<td>Fabricless, satin finish</td>
<td></td>
</tr>
<tr>
<td>Symmetrical, 4.5 mm</td>
<td></td>
</tr>
</tbody>
</table>
Flow and Rebound of Interface Material:
The liner interface materials each respond differently to pressure. Clinicians must consider the needs of their patients when determining which interface type is most appropriate.

<table>
<thead>
<tr>
<th>Flow</th>
<th>Rebound</th>
</tr>
</thead>
<tbody>
<tr>
<td>High</td>
<td>Low</td>
</tr>
<tr>
<td>Low</td>
<td>High</td>
</tr>
</tbody>
</table>

**Alpha Classic Gel**
High flow helps the Classic Gel adapt to uneven socket pressures. Low rebound means the liner will maintain this adapted shape over time.

**Alpha Hybrid Gel**
Hybrid Gel features balanced flow and rebound, making it a great intermediate solution.

**Alpha Silicones**
Low flow prevents the silicone from migrating away from highly sensitive areas, while high rebound helps the liner maintain its original shape.

Interface Material:

**Classic**
- Thermoplastic elastomer that provides ultimate comfort as well as protection from impact and shear for extremely skin-friendly gel with Vitamin E and mineral oil

**Hybrid**
- Thermoplastic Elastomer Gel that is a bridge between Alpha Classic gel and silicone
- Durable gel with Vitamin E, mineral oil, and Kevlar®

**Express Silicone**
- Softer-durometer silicone that replicates the feel and comfort of TPE gel liners
- Platinum-cured, medical-grade silicone contains skin-friendly Vitamin E

**Silicone**
- Proprietary platinum-cured medical grade silicone designed for comfort and performance
- Custom blend of Vitamin E and skin conditioners for a non-greasy and non-tacky surface

**SmartTemp Silicone**
- Exclusive formula contains Outlast® that continually absorbs, stores, and releases excess body heat when needed most
- Uses medical-grade silicone yet as skin temperature rises, the silicone softens and feels similar to thermoplastic elastomer
- Liner technology proactively manages the build-up of heat and moisture resulting in less sweating and chafing
Alpha® Liners

Fabrics:
Alpha Liners are available in several fabric options. Each option has unique characteristics that suit specific patient needs such as donning with limited hand dexterity and controlling pistoning with one-way stretch without requiring a constricting distal matrix.

Select
• Allows for easy bending and flexing of the knee
• One-way stretch fabric controls pistoning without a distal matrix
• Allows circumferential stretch, yet maintains liner elongation within specified limits
• Available in two colors - gray and taupe

Original
• Durable fabric that extends the life of a liner
• Smooth texture allows for ease in donning prosthetic socket
• Available in green/gray

Spirit
• Flexible unbroken loop fabric allows easy donning and doffing
• Available in buff color only

MAX
• One-way stretch fabric minimizes pistoning yet maintains durability
• Fabric allows for increased range of knee motion
• Available in buff color only

Flex
• Helps knee bend comfortably for extended periods
• Ensures easy donning and doffing
• Well suited for amputees with limited hand dexterity
• Available in buff color only

Satin
• Helps knee bend comfortably for extended periods of time
• Ensures easy donning and doffing
• Well-suited for amputees with limited hand dexterity
Cleaning and Care

Proper hygiene is extremely important when using the Alpha Liner. Please review these care instructions very thoroughly with the amputee.

The liner must be thoroughly cleaned at the end of each day of wear. WillowWood strongly recommends providing each amputee with two Alpha Liners so that the amputee can wear one while cleaning and drying the other. Rotating the liners also allows fresh mineral oil to flow to the surface of liners with Classic and Hybrid Gels between uses.

Daily Cleaning

With the logo side of the liner facing in, clean the liner thoroughly with luke-warm tap water and a body soap that does not irritate the skin. Apply the soap either with a clean, soft cloth or sponge. Rinse all the soap residue from the liner with water. Dry the gel side of the liner with a clean, lint-free cloth. Invert the liner so that the logo is on the outside and the logo is on the outside. Place the liner, logo side out, onto the Drying Stand.

Note: Do not scrub the Alpha Liner. Scrubbing can roughen the surface of the liner, which can then irritate the skin.

Weekly Disinfection

Place a small amount of ethyl or isopropyl alcohol on a soft, clean cloth. Lightly wipe the gel side of the liner with the cloth for two minutes. Rinse off any excess alcohol with water. Rinse off any excess alcohol with water. Place the liner, on the drying stand and allow it to dry with the logo on the outside.

Note: Do not immerse the liner in ethyl or isopropyl alcohol. Extended contact with large amounts of ethyl or isopropyl alcohol will stiffen the liner.

Daily Inspection of the Liner

Explain to the amputee that every Alpha Liner should be inspected after each day of use. The amputee should examine the liner very carefully for any signs of damage or unusual wear, which may indicate changes in the prosthetic fit. In order to preserve the warranty, be sure to instruct the amputee to contact you immediately if any unusual wear is noticed.

If using a Locking Liner, check to ensure that the locking pin is secure. Instruct the amputee to contact you immediately if any looseness is noticed.

Storage

When the liner is not being worn, it should be stored logo side out in a cool, dry place. If the liner will not be used for an extended period, cover the dry liner with a clean plastic bag.
Alpha® Liner Profiles

Uniform Profile: transtibial, upper extremity
- Gel is distributed evenly throughout the liner
- Gel behind the knee thins to 3 mm for easy bending of the knee
- Well-suited for most transtibial applications

Contoured Profile: transtibial
- Additional 3 mm gel pads on anterior distal walls
- Gel behind the knee thins to 3 mm for easy bending of the knee
- Good choice for transtibial patients with prominent tibial crest

Tapered Profile: transtibial
- Uniform gel style with extra 3 mm tibial gel pads
- Gel behind the knee thins to 3 mm for easy bending of the knee
- Ideal for conical residual limbs and applications

Progressive Profile: transtibial
- Gel thins to 2.5 mm behind knee for broad range of knee motion
- Provides extra cushioning at distal end and over tibial crest
- Good choice for moderate to high activity level transtibial patients
Alpha® Liner Profiles

**Symmetrical Profile:** transtibial, transfemoral

- Extra gel thickness distally for maximum comfort
- Rotatable to extend life of the liner
- Symmetrical AK is a good choice for transfemoral amputees preferring a thin gel profile and who reflect liners for greater comfort at the socket trim line
- Symmetrical, AK and Symmetrical, 4.5 mm profiles provide gel 9 mm distally for maximum comfort
- Symmetrical 6 mm profile is intended for transtibial or transfemoral use

**AK Profile:** transfemoral

- 9 mm lateral gel pad protects distal femur
- Thin top edge for slim profile under clothing
- Ideal comfort for transfemoral amputees
Alpha Classic® Liners

Overview

In order to provide an excellent socket fit and maximum comfort, Alpha Classic Liners are available in three gel thicknesses and various profiles. Alpha Classic Liners are composed of a skin-friendly thermoplastic elastomer. The gel flows to adapt to uneven socket pressures, while its low rebound means the liner maintains its adapted shape over time. The liners are heat moldable, allowing prosthetists to easily stretch the liners within their facilities.

The durable Original fabric helps extend the life of the liner. To aid in maximizing socket life, Alpha Classic Liners will retrofit with other Alpha Liners having the same profile, thickness, and umbrella.

PRODUCT HIGHLIGHTS:

• Distinct gel profiles accommodate various transtibial limb shapes

• Available in Cushion and Locking

• Thermoplastic elastomer gel with mineral oil

• Alpha Classic MP liners offered at a low cost

Alpha Classic Liners are offered in buff and green/gray Original fabric, our most popular fabric offering.

Alpha Basic® Liners

Overview

The Alpha Basic Liner was developed specifically for amputees with low activity levels. The liner has a symmetrical 6 mm gel profile. WillowWood’s Alpha Classic gel is paired with a flexible fabric to ensure easy donning and that the liners do not grab or pull on the knee when flexed. To minimize pistoning, the Alpha Basic Locking Liner utilizes the one-way stretch Select fabric at the distal end of the liner without constricting a patient’s residual limb.

PRODUCT HIGHLIGHTS:

• Designed specifically for low-activity use

• Flexible fabric comfortable for extended periods of knee flexion

• Pistoning minimized distally without a constrictive matrix

• Retfits with common liner profiles

Alpha Basic Liners are available in a flexible, buff fabric. Sizes 16 and 20 feature a 2.3” (5.8 cm) umbrella for a more comfortable fit on smaller residual limbs. For sizes 32, 38 and 44, clinicians may select a larger umbrella to aid in comfort and retrofitability.

Umbrella size is variable based on the liner size.
A larger 4” umbrella is available for sizes 32, 38 and 44. Most likely used in retrofitting or for transfemoral use.

Please Note: A drying stand is not included with the Alpha Basic Liner.
Overview

The Alpha Hybrid Liner allows for easy bending and flexing of the knee, controlled pistoning, and easy donning. Its Hybrid Gel is perfectly paired with a one-way stretch fabric that effectively controls pistoning without incorporating a distal matrix. This fabric, engineered exclusively for WillowWood, allows circumferential stretch, yet maintains liner elongation within specified limits. A flexible panel incorporates an abrasion-resistant fabric allowing the limb to easily flex without pulling and tightening at the knee. This panel and the thin gel behind the knee allows for comfort while sitting or bending for extended periods of time. A new socket should be fabricated for best use of the Alpha Hybrid Liner with progressive gel style. The Alpha Hybrid Liner with uniform gel style is a solution for amputees currently wearing a 6 mm uniform Alpha Classic Liner with Original fabric and want to experience the benefits of this new liner.

PRODUCT HIGHLIGHTS:

• Controls pistoning without a distal matrix
• Cushion liners ideal for use with elevated vacuum suspension
• Retrofitable
• Size of accordion umbrella changes with liner size
• Features a 12-month warranty

Alpha Hybrid Liners are offered in two gel profiles: 6 mm Uniform and Progressive.

WillowWood® Express Liners

PRODUCT HIGHLIGHTS:

- Retrofits with Alpha Classic or Hybrid Liners with uniform or tapered profiles
- Custom silicone formulated specifically for gel liner wearers
- Choose from Original and Select fabrics
- Available in Cushion and Locking

Overview

WillowWood’s Express Liner is a softer-durometer silicone that replicates the feel and comfort of TPE gel liners. The platinum-cured, medical-grade silicone contains skin-friendly Vitamin E to foster a healthy limb environment. And true to WillowWood form, no messy lotions or creams are necessary to don the liner. The soft silicone of the Express Liner may be covered in durable Original fabric or the one-way stretch Select fabric to help extend the life of the liner.

Patients wearing Alpha Classic or Hybrid Liners with a uniform profile may be retrofit with WillowWood Express Liners with a uniform profile and a 6 mm base thickness.

L-CODE SUGGESTIONS

L5679 Cushion Liner (bill once per liner)
L5673 Locking Liner (bill once per liner)

WARRANTY

12 months from date of patient fitting

TRIAL PERIOD

30 days from date of patient fitting
Overview
WillowWood’s Alpha Silicone Liner uses a proprietary, platinum-cured, medical grade silicone designed for comfort and performance. Our unique blend of silicone, Vitamin E, and skin conditioners results in a pleasing surface that is non-greasy, non-tacky, and comfortable against the skin. The Alpha Silicone Liner uses Select fabric that controls pistoning without using a distal matrix. The Select fabric allows for circumferential stretch making it easy to don for numerous limb shapes. The flexible knee panel provides enhanced knee flexion and a broad range of knee motion. The Alpha Silicone Liner retrofits with Alpha Hybrid Liners with a progressive profile.
Ordering Guidelines: Alpha Silicone® Liners

PROFILE

Progressive Liner Profile

For liners with a progressive profile, the size of the accordion distal umbrella changes with the size of the liner.

SIZING GUIDE

Please refer to the illustrations for recommendations for fitting Alpha Silicone Liners.

TIP

If the limb circumferences fall into the range of both the Medium Plus 2 and the Large 1:
- choose Medium Plus 2 if the distal end is bony and tapered
- choose Large 1 if the distal end is broad and cylindrical

RETROFITTING

Patients wearing Alpha Hybrid Liners with a progressive profile may be retrofit with Alpha Silicone Liners with a progressive profile in the same base size (Medium Plus to Medium Plus, or Large to Large).

Alpha SmartTemp® Liners

PRODUCT HIGHLIGHTS:

• Uses Outlast® technology - originally developed for NASA - to help maintain a comfortable residual limb skin temperature.

• Delays the onset of sweat and reduces chafing

• Uses Select fabric for a broad range of motion

• Available in progressive and uniform profiles

Overview
The Alpha SmartTemp Liner featuring Outlast® combines silicone with the heat management technology of Outlast®. This revolutionary liner regulates heat by responding to fluctuations in skin temperature. The Alpha Smart Temp Liner absorbs and stores heat as it builds up in a residual limb delaying the onset of sweat before it starts. By releasing stored heat as the body cools, the liner stabilizes skin temperature to keep an amputee comfortable all day.

The Alpha SmartTemp Liner uses Select fabric that allows circumferential stretch for easy donning. The liner is offered in both Progressive and Uniform profiles which allows for retrofitting with Alpha Liners of the same profile, base size, and umbrella style.
Ordering Guidelines: Alpha SmartTemp® Liners

Overview

WillowWood’s new Alpha Duo™ Liner combines the comfort of gel with the durability of silicone making it one of the most unique liners on the market today. Inside the Alpha Duo Liner is our skin-friendly Alpha Classic® Gel with mineral oil, providing all-day comfort. Alpha Silicone® covers the liner exterior for durability and protection. The final touch is a satin finish that will not deteriorate over time and slides against itself for easy donning without requiring lubricants.

Designed for transtibial or transfemoral use, the Alpha Duo Liner may be used with suction suspension or elevated vacuum. The liner also retrofits with the fabricless Alpha SmartTemp® Liner used in the transfemoral WillowWood One® system. A One Gel Sock is included with each liner.

PRODUCT HIGHLIGHTS:

• Fabric-free exterior with a satin finish for easy donning; no lubricants needed

• Perfect combination of comfort and durability

• Suitable for transtibial and transfemoral applications

• Provides stability and helps contain soft tissue

• Available in cushion only

Overview
Alpha Classic AK Liners are available with an AK Profile in order to meet the needs specific to transfemoral amputees.

Alpha Classic AK Liners with the AK Profile accommodate the often sensitive areas of transfemoral residual limbs with a specific gel style and incorporate skin-friendly, mineral-oil-based Alpha Classic Gel. The liner, offered in cushion and locking, has 9 mm of gel distally, tapering to 3 mm proximally—with a built-in gel pad to protect the often-sensitive femur. This extra gel pad provides a total of 9 mm of gel at the distal lateral aspect of the liner.

The Spirit fabric used for cushion liners is unique in its ability to flex during donning or doffing and may be used with a Velcro®-like material for added security. Alpha Classic AK Locking Liners use one-way stretch MAX fabric that limits vertical pistoning movements around the complete circumference of the liner.
Ordering Guidelines: Alpha Classic® AK Liners

Alpha Hybrid® AK Liners

PRODUCT HIGHLIGHTS:

• Controls pistoning without a distal matrix

• Hybrid gel is skin-friendly and resists excessive elongation

• Rotate liners to increase longevity

Overview

Alpha Hybrid AK Liners have a Symmetrical Profile that has 9 mm gel distally and then taper to 2.5 mm gel at the anterior and posterior. This symmetrical design allows the user to rotate the liner for extended wear. The liner utilizes one-way stretch fabric for controlled pistoning without a rigid distal matrix and provides tissue compression without uncomfortable pressure on the limb. The locking version features an accordion-style umbrella that blends with a patient’s anatomy for an almost unnoticeable feeling.

The symmetrical profile is a good choice for amputees who reflect liners for greater comfort at the socket brim line. The Select fabric’s one-way stretch controls pistoning while remaining easy to don.
Ordering Guidelines: Alpha Hybrid® AK Liners

PROFILE

Symmetrical Liner Profile

For liners with a progressive profile, the size of the accordion distal umbrella changes with the size of the liner.

SIZING GUIDE

Please refer to the illustrations for recommendations for fitting Alpha Hybrid AK Liners.

WillowWood® Express AK Liners

PRODUCT HIGHLIGHTS:

• Retrofits with Alpha Classic AK Liners with an AK profiles

• Custom silicone formulated specifically for gel liner wearers

• Available in Cushion and Locking

Overview
WillowWood’s Express AK Liner is a softer-durometer silicone that replicates the feel and comfort of TPE gel liners. The platinum-cured, medical-grade silicone contains skin-friendly Vitamin E to foster a healthy limb environment. No messy lotions or creams are necessary to don the liner. The liner’s outer fabric is determined by the type of suspension that will be used. Express AK Cushion Liners use the Spirit fabric while the locking version uses the one-way stretch MAX fabric to help extend the life of the liner.

Express AK Liners are also available in one-way stretch Select fabric.
Ordering Guidelines: WillowWood® Express AK Liners

Alpha Silicone® AK Liners

PRODUCT HIGHLIGHTS:

- Non-Greasy & non-tacky surface
- Controls pistoning without a distal matrix
- Accordion umbrella blends with a patient’s anatomy
- Retrofits with Alpha Hybrid AK Liner & Alpha Classic AK Liner with symmetrical profile
- Features a trial period and 12-month warranty

Overview

The Alpha Silicone AK Liner with symmetrical profile provides extra protection to the distal femur and allows the liner to be rotated for extended wear. The liner uses a proprietary, platinum-cured, medical grade silicone designed for both comfort and performance for transfemoral amputees. Our unique blend of silicone, Vitamin E, and skin conditioners results in a smooth surface that is non-greasy, non-tacky, and comfortable against the skin. The Alpha Silicone AK Liner uses Select fabric that controls pistoning without using a distal matrix yet allows for circumferential stretch for easy donning. The Alpha Silicone AK Liner retrofits with Alpha Hybrid AK Liners and Alpha Classic AK Liners with a symmetrical profile.

Alpha Silicone AK Liners are constructed of our one-way stretch Select fabric for controlling pistoning.

The symmetrical profile allows an Alpha Silicone AK Liner to retrofit with the Alpha Hybrid AK Liner.

The size of the accordion umbrella changes with the liner size.
Ordering Guidelines: Alpha Silicone® AK Liners

For liners with a symmetrical profile, the size of the accordion distal umbrella changes with the size of the liner.

RETROFITTING
Patients wearing Alpha Hybrid AK Liners or Alpha Classic AK Liners with a symmetrical profile may be retrofit with Alpha Silicone AK Liners in the same base size (Medium Plus to Medium Plus, or Large to Large). The Large Plus and Extra Large liner sizes directly retrofit.
Alpha SmartTemp® AK Liners

PRODUCT HIGHLIGHTS:

• Liner utilizes Outlast® technology to absorb and store heat from a residual limb
• Delays the onset of sweat
• One-way stretch Select fabric controls positioning

Overview
Alpha SmartTemp AK Liner featuring Outlast® combines silicone with the heat management technology of Outlast®. This revolutionary liner regulates heat by responding to fluctuation in skin temperature. By releasing stored heat as the body cools down, the liner stabilizes skin temperature to keep an amputee comfortable all day.

The Alpha SmartTemp AK Liner uses Select fabric that allows circumferential stretch for easy donning. Yet the one-way stretch fabric controls positioning without using a distal matrix.
Ordering Guidelines: Alpha SmartTemp® AK Liners

PROFILE

Liners with a progressive profile, the size of the accordion distal umbrella changes with the size of the liner.

SIZING GUIDE

L-CODE SUGGESTIONS

L5679 Cushion Liner (bill once per liner)
L5673 Locking Liner (bill once per liner)
Alpha DESIGN® Liners

PRODUCT HIGHLIGHTS:

• Adjust gel thickness up to 25 mm

• Available for transtibial, transfemoral, or upper extremity applications

• Available in Cushion, Locking, and with Duo technology

• Choose Classic Gel, Hybrid Gel, or Duo’s Classic/Silicone combination for interface materials

• Multiple fabric choices

Overview
Alpha DESIGN Liners offer custom-designed gel profiles for each patient, providing a fit and comfort unmatched by off-the-shelf liners. For patients with atypical residual limb contours or for patients who don’t get the best fit from prefabricated liners, Alpha DESIGN Liners offer a tailored solution. Practitioners determine gel placement, pattern and thickness as well as fabric type to suite patient needs. Gel may be up to 25 mm thick, especially useful on invaginated limbs or bony limbs. Gel on the proximal edge may be as thin as 3 mm. Behind the knee, gel may be as thin as 3 mm for greater comfort and range of knee motion. Alpha DESIGN Liners may be created from casts or digital files. Various ordering channels are available including OMEGA software, the Alpha DESIGN iOS app, FusiFormCAST, or online order forms on willowwoodco.com.

Alpha® Upper Extremity Liners

PRODUCT HIGHLIGHTS:

• Made of comfortable Alpha Classic Gel

• Uniquely-shaped umbrella for upper extremity

• For above-elbow & below-elbow amputees

• Available only in locking

Overview
The comfort of the Alpha Liner is available for upper extremity amputees! WillowWood has adapted its revolutionary lower extremity Alpha Liners for use by transradial and transthumeral amputees. In order to provide maximum comfort and excellent socket fit, the Alpha Classic Upper Extremity Liner is available in 3 mm gel thickness and three sizes to adapt to an amputee’s limb circumference. The unique oval-shaped umbrella allows for a more comfortable fitting liner on upper extremity patients. Like the lower extremity liners, the Alpha Classic Upper Extremity Liner is heat moldable, allowing prosthetists to easily tailor the liner’s fit within their facilities. The Alpha Classic Upper Extremity Liner is designed for use with 1/4 x 20 threaded pins.
Ordering Guidelines: Alpha® Upper Extremity Liners
